

## Product description

- Type: 386

- Product name: Allround Moulding Reducer Moulding Type 386  
Two-part screw system, made of aluminium  
incl. fastener
- Length of the moulding: 3.00 / 2.70 / 1.00 or 0.90 m
- Top section width: 44 mm
- Base section width: 40 mm
- Moulding height: 5.0-11.5 mm
- Cover width: 12 mm
- Aluminium alloy: EN AW-6060
- Anodised colours: silver, gold, sand, bronze, stainless steel look

The aforementioned values are typical or average values, but are not deemed warranted qualities.

## Assembly/installation

### **Base section:**

Screw with TORX screws and/or glue down with a suitable glue on a subfloor that is level, stable and free from dirt, grease and dust.

When installing the floor covering, ensure sufficient expansion joints.

### **Top section:**

Position, align and screw in the threaded channel of the base section with the screws provided. Adjust height differences by hammering moderately using a wooden block. Never hammer on the screws, always in between.

Afterwards, re-tighten the screws by hand. In this way you achieve the optimum pre-stressing and prevent the screws from loosening and protruding over the dip.
